

# Rescues on ski slopes and loipes

## TERCOM-REC0002 / Terrestrial Rescue Commission

The ICAR Terrestrial rescue committee recommends for rescues on ski slopes and loipes:

-> fundamentally at least two rescuers take care of an injured person and rest him in a rescue device (Canadian, Cascade, Akja, Helicopter) according to his injury.

-> on transport in an Universal Akja usually 2 rescuers are mandatory. The person behind can use poles or a rope.

-> exceptional on easy flat slopes with good snow conditions and minor injuries one rescuer maybe sufficient for the Universal Akja

Done at Obergurgl on September 19, 1998.

The commission for terrestrial rescue of ICAR:

The president	The vice president
Karl Peter Götzfried	Bruno Jelk
