

Workshop - Vehicles

Workshop – Vehicles

I can present a result – but no conclusion

Patient Hand Over Point

Purpose of the vehicle / Situation with hospitals

- Most of the cases there will be a hand over to a “Normal” rescue team / ambulance car at the closest possible point
- In some cases there will be a direct transport to the hospital
- Bergwacht Bayern – 60% direct to the hospital

General

Legal situation concerning the medical equipment in the car

In some countries there are requirements for ambulance cars“ which are difficult / cannot be fulfilled.

Transpot of Strechers

Various opinions

Electric Cars

Some governments are pushing to use electric cars

Problems with range and duration of use.

Current models are not suitable for our needs.

Other situation with e-bikes. Already in use.

Possible next development – Electric ATV, snow mobiles,...

What the situation in 5 years time will be....????

Very fast development of new technologies

Crew and vehicle size

„Normal crew“ approx 4 persons

More rescuers have to follow in private cars

Size is also a issue,

“the bigger the better” ist not applicable for our vehicles

Weight, legal issues, driving licences,.....

Cost component is not to forget

INDUSTRIE DOES NOT SUPPORT OUR LIMITED NEED

We enjoyed the open exchange
&
Therapy session
